

SAP BusinessObjects™ Connector

Redwood Extensions: WorkloadConnect Library

At A Glance

Features

- Seamless SAP BusinessObjects workload integration
- Comprehensive enterprise BI workload management and control
- Standardized, automated BI workload set up and execution

Benefits

- Eliminate data silos and improve BI data integrity
- Reduce costs while increasing agility and improving processes
- Realize faster ROI and greater control with less customization

Advantages

- Leverage the only workload automation solution fully integrated with SAP NetWeaver
- Control dependent SAP and non-SAP workload from your core SAP environment
- Future-proof your workload management environment with flexible event-driven architecture

Deeper Insight for Competitive Advantage

A critical business intelligence (BI) tool, SAP BusinessObjects™ helps you define your business strategy, weigh risk against return, and streamline execution. Integrating SAP BusinessObjects processes with the wider SAP® landscape is vital to supporting informed strategic and operational decisions. Redwood automation solutions are the logical choice for addressing this critical need.

Cronacle, which is integrated into the SAP NetWeaver™ platform as SAP Central Process Scheduling by Redwood, provides seamless SAP BusinessObjects workload integration. The solution centrally manages SAP BusinessObjects and all dependent workloads, assuring complete and consistent data for all critical BI processes. Cronacle and SAP Central Process Scheduling easily orchestrate processes across a wide variety of applications and systems – SAP and non-SAP – enabling you to leverage BI data across the enterprise and putting competitive advantage within your reach.

Redwood automation solutions employ a reliable and secure management infrastructure for SAP BusinessObjects. Using standard task definitions, users define an SAP BusinessObjects system as a workload automation target. The solution leverages its built-in Web services capabilities to connect and pass commands directly to the SAP BusinessObjects internal scheduler. This innovative approach provides complete,

centralized control and integration with no software installation, configuration changes, or additional security on the SAP BusinessObjects system.

Rapid Deployment for Rapid Return

Designed to get you up and running quickly, the Redwood connector for SAP BusinessObjects imports existing SAP BusinessObjects report definitions and automatically creates the necessary job definitions and runtime parameters, making them immediately available for use in your enterprise workload environment. This automated import and setup capability greatly simplifies the integration process, delivering rapid return on investment. The solution's ability to raise events within the SAP BusinessObjects system eliminates the need to change the SAP BusinessObjects automation configuration, providing even greater flexibility and control.

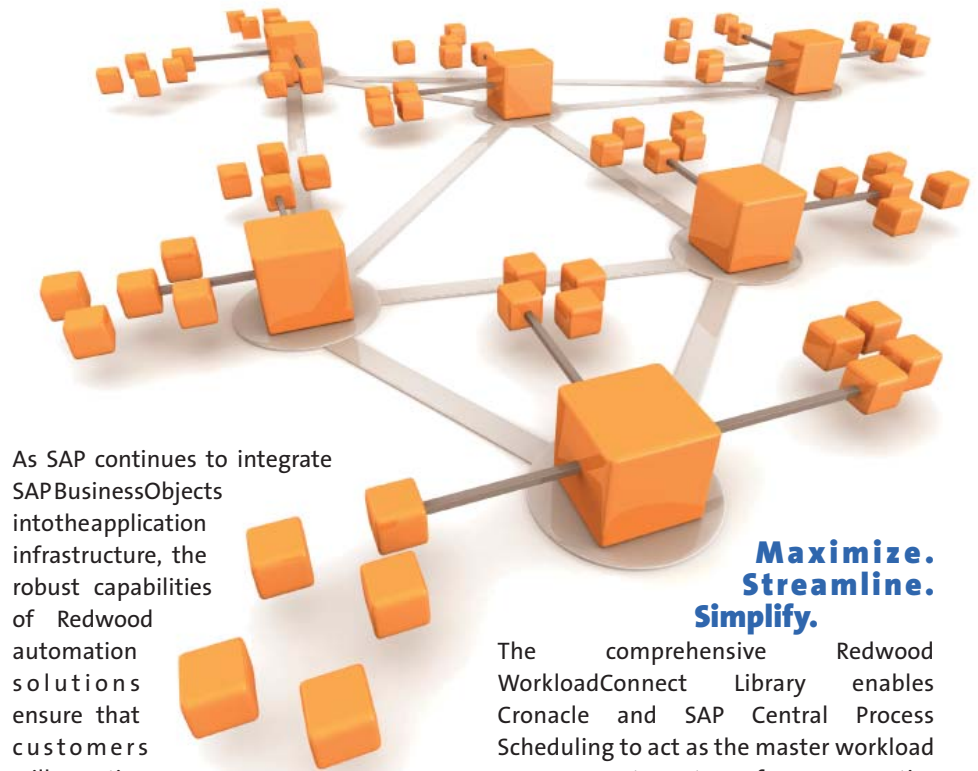

SAP BusinessObjects™ Connector

Redwood Extensions: WorkloadConnect Library

SAP Central Process Scheduling can integrate SAP BusinessObjects processes into your enterprise business process environment. By producing BI reports in-stream with the IT workload that underpins your business processes, you can be certain that the data supporting critical strategic and operational decisions is complete, up to date, and in context. This event-driven processing ensures that SAP BusinessObjects reports run only when business processes delivering the required data have been successfully completed. Business users are notified automatically when critical BI reports are ready, and a direct link to the reports enables users to make immediate use of the most current BI data.

Flexible Architecture for Future-Proof Automation

Cronacle and SAP Central Process Scheduling by Redwood employ centralized management, an intuitive interface, and dynamic event-driven architecture to deliver a flexible, easy-to-use solution that can readily adapt to business and IT changes in the enterprise. Requiring no changes to the SAP BusinessObjects system, the Redwood connector for SAP BusinessObjects embodies this open and flexible approach.

As SAP continues to integrate SAP BusinessObjects into the application infrastructure, the robust capabilities of Redwood automation solutions ensure that customers will continue to maximize the value of their investment across the enterprise. As the wider business technology environment continues to evolve, customers will be able to reduce the cost and complexity of integrating and managing future process automation and workload management requirements.

SAP BusinessObjects empowers businesses throughout the world to get ahead of their competition – and stay there. Cronacle and SAP Central Process Scheduling by Redwood empower you to leverage the value of SAP BusinessObjects across your extended enterprise.

Maximize. Streamline. Simplify.

The comprehensive Redwood WorkloadConnect Library enables Cronacle and SAP Central Process Scheduling to act as the master workload management system for your entire enterprise, addressing nearly every platform and major application. Redwood automation solutions enable you to maximize resources, streamline complex processes, and dramatically simplify workload administration.
